

NDIR GAS ANALYZER FOR STACK GAS

DATA SHEET

ZSU-6

OVERVIEW

This analyzer consists of an infrared gas analyzer, an O₂ sensor and a gas sampling device. It is used for simultaneous and continuous measurement of the NO_x, SO₂, CO, CO₂ and O₂ components in the flue gas of various boilers, garbage incinerators, etc.

For CO and O₂ measurement specifications, the function for coping with the Japanese regulation on dioxin emission is incorporated.

FEATURES

1. Gas concentrations of 5 components is measurable simultaneously and continuously
NO_x, SO₂, CO and CO₂ gas concentration measurements are integrated by infrared method, to which a zirconia or magnetic type O₂ sensor is added for O₂ measurement. Therefore, the gas concentrations of 5 components are simultaneously and continuously measurable.
2. The use of highly sensitive and reliable mass flow detector allows the range ratio of up to 1:25 with the standard 2 range.
3. Maintenance can be performed from the front side, thus saving the installation space.
Unitized structure of the analyzing block and gas sampling module enables better maintenance.
4. Provided with abundant functions including O₂ correction output, average value output, automatic calibration, CO peak count alarm, automatic range changeover, and alarms.
5. N₂O and CH₄ can also be measured as an optional feature.
Having warming effect 300 times as high as that of CO₂, N₂O is the greenhouse gas most controversial now.
